

AUSTRALIA'S MOST COMFORTABLE, HEALTHY AND ENERGY EFFICIENT HOMES

Passive House (from the German Passivhaus) is a comprehensive design and construction process, combining excellence in material science, engineering, architecture and construction to deliver proven, year round comfortable, ultra low energy buildings.

Three local companies - **Passive House**, **European Timber Windows & Doors** and **Nimori Jamison Architects** bring together an expert team of engineer, material scientist, registered builder, joiners, carpenters and architects to design and construct Australia's most comfortable, healthy and energy efficient homes.

Using natural materials, foam free timber construction, with the best performing triple glazed windows and doors, our team can deliver beautifully designed, high performing buildings - meaning your house can be healthy and extremely comfortable all year round, with minimal energy consumption.

Insulated
The highest performing windows & doors, and a building shell fully insulated, with weather tight & moisture control layers - always keeping comfort in the house; with almost no active heating or cooling.

Efficient
Passive House buildings deliver energy savings of up to 90% compared with typical Australian buildings. By comparison, our Passive House homes rate 9-10 stars in the local rating systems.

Comfortable
Passive House buildings are praised for their high level of comfort. Draft free, quiet and stable in temperature and humidity all year round.

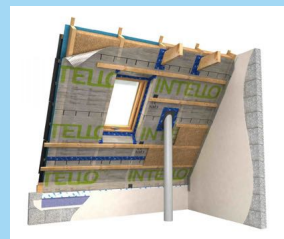

Ventilated
A ventilation system consistently supplies filtered 100% fresh air 24/7, recovering up to 90% energy, making for superior indoor air quality.

Passive House Pty Ltd are the local industry leaders in Passivhaus building solutions: providing design, construction and engineering services and expertise. Passive House products and systems are designed and calculated to perform at the highest levels in Australian conditions.

With a 1500m2 specialist joinery, **European Timber Windows & Doors** custom make the finest and highest performing windows, doors, sliding doors & timber curtain walls. Using Accoya® timber with a guaranteed life of 50 years, or KD Spotted Gum for Bush Fire areas, assures their longevity.

Nimori Jamison Architects assist in the delivery of a bespoke architecturally designed buildings. We have worked closely with Passive House for over 10 years and are experienced in residential, commercial and institutional architecture.
